

## POLECAM V1.1

I was looking for a good polecam that was retractable so I could travel with it round South America for various sports/adventure filming. So here it is:

1)

2)

3)

1) Shows the pole retracted and is 600mm long fully retracted.

2) Shows the pole extended and is 1200mm long fully extended.

3) Shows the mounting

It can be extended to any length between 600 and 1200mm and locked into place.

All together it cost roughly \$40.

POLE: From Bunnings and originally was a tree piece telescopic window cleaner(~\$7). I cut the 3<sup>rd</sup> telescopic section out because I didn't think it needed to be longer than 1200mm. the pole came with a rubber/foam handle. I picked up another bit of this foam/rubber stuff and used one for the handle and the other for shock absorbing padding by cutting it in half and double layering it on the end of the pole. I fixed the padding into place with 2 cable ties.

MOUNTING: Official GoPro handle bar mounting. \$30 from ebay. I just clamped the mounting over the shock absorbing foam.

CLAMP: Although the pole "locks" into place by twisting it I found it was still a bit wobbly so got a hose clamp from Bunnings ~\$3.

There you have it!
